

Bedrock Data Projected Yearly Cash Flow - Available-Cash Payout With Miner Reserve

Based on Ed's May 27 update: 300 Whatsminer M50 per box, 1.1 MW cap per box, 95% uptime, \$36/PH/day, generator reserve at \$0.005/kWh, miner repair/replacement reserve at \$7/miner/month, and equipment payout limited to cash left after operating costs and reserves.

Payout logic: Equipment reimbursement is limited to cash left after gas, setup purchases, SG&A, generator reserve, and miner repair/replacement reserve. Shortfalls are tracked against the target payout schedule and should be treated as shared operating risk unless the parties agree otherwise.

Pool/software to confirm: If the \$36/PH/day revenue is already net of pool fee, remove the Pool Fee line to avoid double counting. Also confirm what the Software Fee represents, who charges it, and whether it is required for M50 operation.

Reserve logic: Generator reserve follows Ed's \$0.005/kWh answer. Miner reserve is modeled at \$7/miner/month: \$2,100 per operating container and \$8,400/month at four containers.
